Project: Developing Inhibitors for Wilson Disease Causing Copper Transporting ATPase (ATP7B)

Grant Awarded: SRSF –Post Doctoral (20160- 17) 590 CAD \$ / 17 weeks

This is a tremendous opportunity to gain international experience...SICI has given incredible opportunity to meet and interact with people not only from Canada but also throughout world. International students association was very active in organizing various events at weekends, giving several opportunities to explore the city, learn about Canadian culture and to interact with all other international students. Indian students association was very helpful and assisted in introducing all other Indians in the university, on the other hand gave homely feeling in the foreign land.
